

Bangladesh (Compared with other countries in WHO South-east Asia Region)

Indicator:

Expectation of lost healthy years at birth

Definition: Expected lost healthy years at birth (LHE) is calculated as $LHE = LEX - HALE$ and is the expected equivalent number of years of full health lost through living in health states of less than full health.

Legend:

- Expectation of lost healthy years at birth, males
- Expectation of lost healthy years at birth, females
