

Bangladesh (Compared with other countries in WHO South-east Asia Region)

Indicator:

Per capita total expenditure on health in international dollars, 2000

Definition: Total health expenditure per capita is the per capita amount of the sum of Public Health Expenditure (PHE) and Private Expenditure on Health (PvtHE). The international dollar is a common currency unit that takes into account differences in the relative purchasing power of various currencies. Figures expressed in international dollars are calculated using purchasing power parities (PPP), which are rates of currency conversion constructed to account for differences in price level between countries.

Country	Ordered by Per capita total expenditure on health in international dollars, 2000
Maldives	254
Thailand	237
Sri Lanka	120
Indonesia	84
India	71
Nepal	66
Bhutan	64
Bangladesh	47
